Subject: You all have got to get this Really Right Stuff L-Plate. Watch the video below from Really Right Stuff Photographers,

Have you ever been "Out There" with your camera flopped over on its side to shoot Portrait? Does your tripod want to flop over because of this lopsided position? Do you shoot Portrait and then want to shoot Landscape in your next shot? How fast can you switch your camera on your tripod from Landscape to Portrait and back again? If it's a big hassle for you, then you have got to get this Really Right Stuff L-Plate. Don't have a RRS head? They have conversion kits!!!! So, watch this video below from Really Right Stuff.
